# Weekly Coal Production

Production for Week Ended:  
January 14, 1989

## Preface

The *Weekly Coal Production (WCP)* provides weekly production estimates of U.S. coal by State, as well as supplementary data which are usually published twice a month. Supplement 1 includes monthly and annual U.S. level data on coal production, consumption, stocks, imports, and exports. This week's Supplement 2 contains detailed monthly data covering electric utility coal consumption, stocks, and receipts (quantity and price); and coal imports and exports.

This publication is prepared by the Coal Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as

specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. *Weekly Coal Production* is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly *Coal Distribution Report*, the *Quarterly Coal Report*, *Coal Production 1987*, and *Coal Data: A Reference*.

This publication was prepared by Wayne M. Watson under the direction of Mary K. Paull and Noel C. Balthasar, Chief, Data Systems Branch. *Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at (202)586-8800*.

• Released for Printing February 3, 1989

## Summary

U.S. coal production in the week ended January 14, 1989, as estimated by the Energy Information Administration, totaled 20 million short tons, a 21 percent increase from production in the previous week. Production east of the Mississippi increased by 3 million short tons (32 percent), and production west of the Mississippi increased by 0.4 million short tons (6 percent).

This week's coal output was 0.9 million short tons or 5 percent higher than in the corresponding week of 1988.

This report contains data on electric utility coal receipts and prices for October 1988 in addition to electric utility coal consumption and stocks for November 1988. Also included are data on U.S. coal and coke exports and imports for November 1988.

Some of the highlights of these data are:

- Coal consumption at electric utility plants through November 1988 continued to surpass 1987 levels for the same period, due to the increased demand for electricity and the substitution of coal-fired

generation for hydroelectric generation in some areas affected by the drought. The West North Central, Mountain and West South Central Census Divisions are notably higher for the first ten months of 1988 versus the comparable period of 1987. This is particularly the case in Minnesota, the Dakotas, Texas and Montana.

- The average price of coal received at electric utility plants in 1988 continues to run below the price levels of 1987 because of the renegotiation and/or expiration of old more costlier contracts, the increase in competition among coal producers and higher miner productivity.
- Coal stocks at electric utility plants, which dropped significantly in June 1988 and reached the lowest level in a decade in August, reversed and have continued to increase through November 1988, as is the customary Fall trend.
- Coal exports in November 1988 were 7 percent lower than the previous month, however, the year-to-date level for 1988 continues to remain well above 1987 levels primarily due to increased exports to Japan, Canada, and Europe (primarily to Belgium, Luxembourg, Denmark and France).
